Memo to File:

RE: Portland Cement Company of  
Utah  
Little Mountain Mine  
ACT/045/005  
Tooele County, Utah

On April 5, 1984, Division staff members Ev Hooper, Tom Munson and Steve Cox toured the Little Mountain Mine site west of Grantsville. The staff was accompanied by Jim Lake, Portland Cement, and Bill Bluck, CH2M Hill. CH2M Hill is preparing the permit application for Portland Cement on this project.

The purpose of the tour was to familiarize the staff with the operation and to identify problems which must be addressed in the permit application. Portland Cement is currently quarrying limestone and crushing it on-site. The crushed limestone is then transported by truck to Salt Lake City for processing.

Several items which must be addressed in the permit application were discussed. These included the need for soil surveys, location and sizing of hydrologic structures and the preparation of a complete and detailed reclamation and revegetation plan. The applicant stated that a preliminary plan will be submitted within the next two weeks.
